

	ID	Name	Project name
1	202239628	ZHOU SIYU	Movie Ratings Processor Analyze a dataset of movies and compute average ratings by genre and year. Filtering, Grouping, Data Summary Printed report or chart with top-rated genres.
2	202239629	CUI XIAOSEN	University Enrollment Statistics Analyze multi-year student enrollment data to find gender and department trends. GroupBy, Aggregation, Plotting Multi-bar chart comparing enrollments per department and gender.
3	202339674	ZHOU ZIXUAN	Stock Price Trend Explorer Fetch daily stock data using an API (example: Yahoo Finance) and visualize price changes. API Requests, Time-Series Plotting, Pandas Line chart showing trends and moving averages.
4	202339765	LIU HONGJUN	Online Retail Data Cleaner Process a messy retail dataset (duplicates, missing values, inconsistent currency). Data Cleaning, Normalization, Outlier Detection Clean CSV and short report describing transformations.
5	202438377	KOMILJONOV RAHIMJON	Library Borrowing Trend Forecast Analyze and forecast library usage trends. - Clean duplicate ISBNs and standardize dates. - Perform cohort analysis (reader retention by month). - Forecast borrow rate per genre. Visualization: Borrowing cohort curves and forecast trend lines.
6	202539427	LOPCHAN NISHANT	Online Education Platform: Student Engagement Analysis Use clickstream log data (CSV/JSON) from an LMS system to detect engagement and dropout risk. - Clean event logs (remove bot clicks, merge duplicate user sessions). - Create session-level features (time on task, number of interactions). - Predict dropout or exam failure using classification models. - Identify key engagement patterns. Visualization: Engagement heatmaps, session duration distributions, feature importance plots.
7	202539434	AKHMADALIEV RUZIBOY	Global Climate Trend Modeling Combine live API weather feeds (OpenWeatherMap, NOAA) with historical CSV climate datasets.

			- Perform multi-source data merging, timezone alignment, and anomaly detection. - Clean unit inconsistencies (°C vs °F, mm vs inches). - Apply seasonal decomposition to detect climate patterns and visualize decade trends. Visualization: Multi-year trend heatmaps and correlation matrices between continents.
8	202539437	MAI TRONG KHANG	Renewable Energy Data Integration and Forecasting Analyze renewable energy generation (solar, wind, hydro) using open datasets (IEA, Kaggle). - Clean and unify units (MWh, kWh) across data sources. - Perform correlation analysis between energy output and weather. - Forecast renewable output for the next quarter using ARIMA/Prophet. Visualization: Seasonal trend decomposition, stacked area chart of energy share by type.
9	202539445	SULTONOV BEHRUZ AKBAROVICH	City Pollution Index Dashboard Integrate local CSV pollution data (PM2.5, NO ₂ , CO ₂) with weather API data to explore correlations. Data Merging, API Integration, Visualization Interactive dashboard showing pollution vs. temperature/humidity.
10	202539446	PARAJULI VISION	Airline Delay Prediction and Visualization Predict flight delays using open U.S. or European flight datasets. - Clean missing flight IDs, times, and airport codes. - Engineer features (distance, weather, airline, weekday). - Train delay classification model (Decision Tree/Logistic). Visualization: Delay frequency heatmaps and correlation plots.
11	202539468	OCHILOV AKHMADJON	Employee Productivity and Stress Analyzer Combine time logs + biometric CSVs to detect overwork indicators. - Clean inconsistent time entries and missing HR data. - Merge productivity with heart rate metrics. - Detect burnout risk using z-score outlier detection. Visualization: Heatmap of productivity vs stress levels.
12	202539462	BATNASAN ERDENESAMBUU	Smart City Energy Usage Dashboard Explore and visualize city-wide energy consumption. Integrate electricity, gas, and water usage data by region. Analyze high-consumption zones and temporal trends. Create an interactive visualization dashboard using Dash.

			Data merging, feature extraction, visualization. Dashboard app + CSV + report.
13	202599303	CHANG ALVIN CHUO WEN	Fraud Detection System <i>Detect anomalies in financial transactions.</i> Preprocess transaction data, normalize values, and apply Isolation Forest or LOF algorithms to find outliers. Anomaly detection, normalization, ML modeling. Notebook + confusion matrix + summary report.
14	202599304	CHANG JIAN RONG	Global Economy Explorer <i>Analyze and visualize world economic indicators.</i> Merge data from World Bank APIs (GDP, inflation, trade). Compute correlations between variables and create global comparison charts. API integration, correlation analysis, visualization. Dashboard + CSV + report.
15	202539490	PANDAY PRASHANT	Financial Market Insights <i>Analyze and visualize stock or crypto trends.</i> Fetch historical prices from a financial API (Yahoo Finance or Binance). Compute daily returns, volatility, and moving averages. Visualize price trends and correlations between assets. API requests, time-series analysis, visualization. Jupyter notebook + report + line charts.
16	202438079	OTAMIRZAEV ABDULLA	Event Participation Predictor Predict participant attendance probability using demographic + historical event data. - Handle missing ages/locations, normalize categories. - Encode categorical variables (OneHot/Label). - Train a classification model (Logistic, XGBoost). Visualization: ROC curve, feature importance, age vs attendance heatmap.
17	202599299	LIU YANZHAO	Hospital Patient Readmission Prediction Model Process hospital patient data (example: UCI diabetes readmission dataset) to predict 30-day readmission risk. Clean missing lab results, medication codes, diagnosis categories. - Encode medical features (example: ICD-9/10 grouping). - Build classification models (XGBoost, Logistic Regression). - Perform SHAP explainability analysis. Visualization: Feature importance graph, readmission probability distributions, SHAP summary plot.
