

	ID	Name	Project
1	202239626	YANG XUEHAO	Travel Itinerary Planner: Build a program that helps users plan trips, storing information about places, dates, and costs in a CSV.
2	202339193	HOANG VAN HAI	Flight Data Organizer: Build an application that manages flight information from a CSV, allowing searches by destination, date, or airline.
3	202339662	LAI YUNDA	Car Rental Tracker: Design a system that keeps track of car rentals, reading customer data and rental periods from a CSV and calculating costs.
4	202339667	XIAO JIAN	COVID-19 Data Processing and Analysis Analyze and visualize global COVID-19 trends using open data. - Download COVID-19 data from Our World in Data. - Clean and merge with population data. - Calculate daily new cases, death rates, vaccination percentages. - Visualize with line charts, bar plots, and heatmaps. - Provide insights (top 5 countries with highest recovery rate).
5	202339671	BAATARCHULUUN UYANGA	Traffic Volume Data Processor Process daily traffic volume data to calculate the busiest hours and average speed per location.
6	202438373	K ZIN PO HTET	City Pollution Index Dashboard Integrate local CSV pollution data (PM2.5, NO ₂ , CO ₂) with weather API data to explore correlations.
7	202438379	SHUKIRILLAEV MUKHAMMADSODIK	Flight Delay Analysis System Process and visualize airline on-time performance datasets. - Clean missing or incorrect delay times. - Compute average delay per airline and destination. - Identify factors influencing delays (example: weather, distance). <i>Visualization:</i> Heatmaps of delay patterns, scatter plots.
8	202438395	BATSAIKHAN AZZAYA	Library Book Management: Develop a program that manages a library's books, allowing users to add and search for books in a CSV file by author or title.

9	202438404	AKHMEDOV YUSUFJON	Predictive Expense Analytics Design a budget management app that analyzes user spending and predicts future expenses. Clean mislabeled categories and missing expense values. - Group transactions by category and visualize monthly trends. - Build a simple regression model for next-month expense prediction. <i>Visualization:</i> Category-wise bar chart and forecast line graph.
10	202438418	TURAEV LAZIZBEK	Fitness Tracker Data Explorer Process and visualize activity data from fitness trackers (Fitbit, Apple Health, etc.). - Handle missing or corrupted step count data. - Compute daily/weekly averages and detect outliers. - Visualize performance improvements and correlations. <i>Visualization:</i> Line plots, scatter plots, and rolling averages.
11	202539452	CHAULAGAIN SUDIP	Energy Consumption Analyzer Analyze household or industrial energy consumption over time and identify peak usage hours.
12	202539454	ACHHAMI SHITAL	Traffic Volume Data Processor Analyze road traffic data to find peak hours and busiest routes.
13	202539478	CHHETRI SABHYATA	Movie Ratings Processor Analyze a dataset of movies and compute average ratings by genre and year.
14	202539482	KHANAL PRAKASH	Sales Data Analyzer Develop a program that reads a CSV file containing sales data. Clean the data, calculate total revenue per product and month, and visualize results

16	202599300	LIM XIN YU	Employee Productivity Analyzer Process time log data to analyze productivity patterns. • Clean inconsistent clock-in/out entries. • Compute total working hours and overtime frequency. • Detect anomalies and visualize weekly productivity. <i>Visualization:</i> Histogram of work hours, line plot per employee.
17	202599301	TAN ELDRIC	Recipe Ingredient Network & Similarity Engine Analyze recipes and recommend ingredient combinations. Clean and normalize ingredient text. • Build co-occurrence matrix and calculate similarity using cosine distance. • Recommend new recipes based on shared ingredients. <i>Visualization:</i> Ingredient network graph and correlation heatmap.
18	202039107	ABDUJALILOV JAMSHID	Pet Adoption Records Keeper: • Design a system that tracks pet adoption, reading from a CSV file to maintain records of pet and adopter details.
